Orbit Release Notes

Version 1.1.4

What's New

1. Minor UI improvements in Orbit.
2. Automatic updating the new list of Cores available in the network in login window
3. Added new popup to notify the user when loading a preset in Core.
4. Show message box to notify the user if preset loading failed in Core.
5. Show message box to notify the user about missed OSC packets.
6. System and Source names are now hard coded to "Orion" & "Virtual Source". No more automatic numbering.
7. Automatic synchronization of workspace when message packet lost.

Issues Fixed

1. Source EQ curves are not shown correct when loading preset.
2. Ruler does not show up when connecting to core which has ruler activated in preset.

Known Issues

1. If Orbit started with no network connection, it may crash.
2. Due to improved preset versioning and file extension, Orbit won't be able to load old preset files from Core.
